100,000+ data points collected as candidates and existing employees play games

11 categories aggregated across your results from all pymetrics games

1 unique pymetrics profile per person used to apply to any role at any company using pymetrics

HOW YOUR PROFILE IS USED

Your pymetrics profile describes your cognitive and emotional results and how you compare to the general population. It will never be shared directly with employers or other third parties.

For a particular job application, candidate results are compared to the results of existing employees in that role. For different roles, different categories may be more or less important for success, which guides a candidate's fit to that role.

UNDERSTANDING YOUR RESULTS

pymetrics categories measure natural tendencies that are quite stable and tend not to change over time. Because of this, your profile will be saved for one year, after which you will have the opportunity to replay the games if you choose.

Remember, this is your personalized profile and it will stay the same no matter what job you are applying to.

Uniqueness is the measure of how much you stand out from the general population within a pymetrics category. **These are your most unique categories:**

RISK TOLERANCE: You tend to carefully test options and choose the safest method to achieve an objective. You also tend to be averse to negative outcomes.

FAIRNESS: You tend to judge most situations as fair.

FOCUS: You tend to apply a focused and consistent approach to your work. You are likely able to concentrate on a single task even in the presence of distracting information.

A person's level of comfort with risk-taking.

YOUR RESULTS

You tend to carefully test options and choose the safest method to achieve an objective. You also tend to be averse to negative outcomes.

WHAT THIS MEANS AT WORK

You might be best suited to work in environments that emphasize cautiousness over risk. You may also be well-suited to working in teams in which you can pursue options that will lead to lower risk outcomes.

THINGS TO LOOK OUT FOR

Taking a cautious approach to risk can be useful, but in some situations the bigger the risk, the bigger the reward. Try to remember that it's not always possible to know how things will turn out and that taking calculated risks can have merit.

DEFINITION

A person's perceptions of fairness in social situations.

YOUR RESULTS

You tend to judge most situations as fair.

WHAT THIS MEANS AT WORK

You may do well in environments where employees share a high degree of trust and where your work involves seeing the best in others. This could mean that you are easy to work in teams and you are accepting of how work and resources are delegated.

THINGS TO LOOK OUT FOR

You may at times contribute more than your fair share of resources or effort towards team tasks. Try to consider others' perspectives and whether you would still perceive the outcome to be equitable.

DEFINITION

A person's concentration style for one or more tasks.

YOUR RESULTS

You tend to apply a focused and consistent approach to your work. You are likely able to concentrate on a single task even in the presence of distracting information.

You may be best suited for work environments in which it is better to focus on one task at a time. However, you may likely be able to work effectively in distracting environments, given your natural tendency to filter out distractions and stick to the task at hand.

THINGS TO LOOK OUT FOR

Be mindful of situations where you could become too focused on a task. Sometimes distractions can present opportunities to support others with their work or get involved in interesting tasks that you might otherwise have missed.

A person's approach to making decisions.

YOUR RESULTS

You tend to make decisions based on qut-instinct. You may also prefer taking a fast and intuitive approach, rather than planning out your work methodically.

WHAT THIS MEANS AT WORK

You may work best in environments where decisiveness and instinctual responses to decisions are most important. This may enable you to quickly take advantage of opportunities that are presented at work.

THINGS TO LOOK OUT FOR

Be mindful of making decisions that have significant consequences. If your decision could lead to unintended or significant consequences, take more time to fully consider the pros and cons of each option before deciding.

DEFINITION

A person's approach to changing behavior based on new information.

You tend to approach situations and tasks in a way that is familiar, as opposed to experimenting with new methods. You are unlikely to be slowed down by mistakes, and may take time to consider the options before changing your approach to a task.

WHAT THIS MEANS AT WORK

You may be best suited to work in environments where tasks are consistent or routine.

THINGS TO LOOK OUT FOR

Taking a consistent approach to tasks and not being deterred by making mistakes can help you to get tasks completed efficiently. Make sure to watch out for times where trying a new way of working might lead to advantageous results.

DEFINITION

A person's approach to managing incoming information and distractions.

You tend not to be easily flustered by mistakes, taking them in your stride as you complete a task. You also tend to be quick to react and respond to information outside of the immediate task you are working on.

You may find that you tend to move quickly between tasks, doing multiple things at the same time. You may be suited to work in environments where the speed of task completion is most important.

THINGS TO LOOK OUT FOR

Given your tendency to get things done quickly, there may be times where the quality or accuracy of your work is impacted. Keep an eye out for situations where accuracy is more important than speed, making sure to review your work.

A person's approach to solving problems using numerical logic.

YOUR RESULTS

You tend to solve numerical and logical problems quickly and reflexively.

WHAT THIS MEANS AT WORK

You may be best suited to fast paced environments that require you to respond quickly.

THINGS TO LOOK OUT FOR

You tend to approach problem solving with speed and agility. Look out for instances where you may overlook important details, and know when to slow down and take a more measured approach to solving problems.

DEFINITION

A person's precision when making judgments using numerical logic.

YOUR RESULTS

You tend to solve numerical and logical problems with precision.

WHAT THIS MEANS AT WORK

You may be best suited to working environments that require you to solve challenging problems with precision.

Your natural tendency suggests that you will take a thoughtful and logical approach to solving problems. Look out for situations where a best-guess estimate may provide an adequate solution.

DEFINITION

A person's strategy for interpreting the emotions of others.

YOUR RESULTS

You tend to interpret the emotions of others through the lens of the surrounding context (i.e., information related to the circumstances surrounding their current emotional state), rather than through facial expressions alone.

WHAT THIS MEANS AT WORK

You may be best suited to work in situations in which seeing the facial reactions of others is not always possible, such as when you are required to speak with colleagues or customers over the phone.

Look out for situations where an individual's emotional expression may not be related to the surrounding context. Try to validate your impressions by observing the facial reactions of others and asking questions to gain more understanding.

A person's tendency to prioritize the needs of others above one's own.

YOUR RESULTS

You tend to trust the good intentions of others. You may find that you're able to easily balance your interests with the needs of others.

WHAT THIS MEANS AT WORK

You may be best suited to work in team-based environments where your generous nature could help to foster trust and supportive team-based work.

THINGS TO LOOK OUT FOR

While your giving nature can be positive, look out for instances where you may be too generous with your resources. Try not to give away too much of your personal or organizational resources, which could result in inequitable outcomes.

DEFINITION

A person's approach toward investing effort based on size of reward and probability of success.

YOUR RESULTS

You tend to work equally hard on all tasks, regardless of how much you expect to be rewarded by completing tasks successfully.

WHAT THIS MEANS AT WORK

You tend to be equally hard-working regardless of the rewards at stake, so you may find that you are able to work well in environments where rewards and recognition are infrequent.

THINGS TO LOOK OUT FOR

Working hard regardless of the reward can be useful, but during busy periods at work you may want to invest less time and effort into less important tasks, so that you have additional time to complete more important work activities.
